

Oshadha Mihiran

Full-Stack Development | Mobile Application Development | DevOps | Quality Assurance Engineering

Colombo, Sri Lanka | Oshadha72mihiran@gmail.com | 0757304043 | [Oshadha-Mihiran](#) | [oshadha72mihiran-afk](#)

SUMMARY

Software Engineering undergraduate with hands-on experience in full-stack development and mobile application development. Proficient in modern technologies including Spring Boot, MERN stack, Next.js, Java, PHP, C++, R and SQL, with a strong foundation in building scalable web applications and RESTful APIs. Experienced in both frontend and backend development, database design, and system integration. Passionate about developing efficient, user-focused software solutions and continuously learning emerging technologies.

EDUCATION

BSc (Hons) in IT Specializing in Software Engineering

Nov 2023 - Present

Sri Lanka Institute of Information Technology (SLIIT)

- GPA : 3.28

TECHNICAL SKILLS

- **Programming & Query Languages:** Python, R, Java, JavaScript, TypeScript, PHP, SQL, Kotlin, C, C++
- **Web & Full-Stack Development:** MERN Stack (MongoDB, Express.js, React.js, Node.js), Next.js, Spring Boot, RESTful API Development, Microservices Architecture
- **Mobile Application Development:** Android Development (Kotlin/Java), Cross-platform concepts, API Integration, SQLite
- **Frontend Development:** React.js, Next.js, HTML, CSS, Tailwind CSS, Responsive UI/UX Design
- **Backend Development:** Node.js, Express.js, Spring Boot, PHP, Java Servlets
- **Databases:** MySQL, MongoDB, Oracle, SQLite
- **DevOps & Cloud:** Docker, Kubernetes, Containerization, Basic CI/CD Concepts
- **Tools & Platforms:** Git, GitHub, VS Code, Postman, Cypress, Virtual Environments (venv)
- **Concepts:** Object-Oriented Programming (OOP), MVC Architecture, REST APIs, Model Deployment, Cloud Computing, Web Development Stacks, Data Warehousing, ETL Process, Business Intelligence

PROJECTS

RebuildHub – Crowdsourced Damage Assessment Platform

2026

- Architected and deployed a full-stack MERN (MongoDB, Express.js, React, Node.js) web application to facilitate post-disaster aid distribution, integrating RESTful APIs and real-time data processing pipelines for damage reporting and resource allocation.
- Leveraged third-party API integrations including Cloudinary for media management, Google Maps API for geospatial visualization, Stripe for secure payment processing, Weather API and NASA EONET API for disaster data ingestion, and Twilio for SMS-based emergency notifications.

CeylonBrew – Tea Plantation Management System

2025

- Developed a scalable enterprise-grade application using Next.js (SSR/SSG), Spring Boot microservices, and MySQL relational database, implementing role-based access control (RBAC) for multi-user environments including plantation managers, field workers, and administrators.
- Integrated interactive data visualization dashboards and an AI-powered chatbot to support real-time operational decision-making, improving workflow efficiency and stakeholder reporting across the plantation management lifecycle.

Telemedicine Platform – Healthcare Microservices

2026

- Designed and implemented a cloud-native healthcare microservices architecture using Spring Boot, React.js, MySQL, Apache Kafka for asynchronous event-driven messaging, Docker for containerization, and Kubernetes for automated orchestration and horizontal scaling.
- Built a secure API Gateway layer to manage service-to-service communication, enforce authentication/authorization, and support container orchestration workflows, ensuring high availability and fault tolerance across distributed healthcare services.

AureaVita – Wellness & Spa Booking App

2025

- Engineered a native Android application using Kotlin and XML layouts, delivering end-to-end features including spa appointment booking, a multi-vendor marketplace, and guided meditation modules with seamless user experience across diverse device configurations.
- Adhered to Material Design 3 guidelines and Android best practices to deliver an accessible, responsive UI/UX with optimized performance, targeting a broad user base through Google Play-ready build configurations.

Flow – Health & Well-being App

2025

- Built a cross-functional Android wellness tracking application using Kotlin, XML, and SQLite for local data persistence, incorporating habit management, progress analytics, and goal-setting features with fully offline-capable functionality.
- Implemented local database architecture with SQLite to ensure data integrity and offline-first performance, enabling seamless user experience without network dependency and supporting CRUD operations for personalized wellness data management.

OnlineJobs.Ik – Job Portal

2024

- Developed a full-stack job portal web application using PHP, HTML5, CSS3, and MySQL, featuring dynamic job listing management, keyword-based search and filtering, and a responsive front-end interface optimized for both job seekers and employers.
- Implemented a secure employer-facing dashboard with role-based access, enabling end-to-end recruitment workflow management including job posting, applicant tracking, and candidate communication within a structured relational database environment.

Bean There – Workspace Management and Café Ordering System

2026

- Developed a full-stack web-based workspace management and café ordering system using PHP, MySQL, Tailwind CSS, and JavaScript, implementing secure user registration, session-based authentication, and role-based access control to ensure data integrity and authorized system interaction.
- Engineered end-to-end desk and meeting room reservation management (CRUD operations) with real-time active booking visibility, a dynamic digital café menu, and a fully functional shopping cart system for streamlined coffee and snack ordering within a unified platform.

Personal Portfolio Website

2026

- Designed and deployed a fully responsive personal portfolio website using HTML5, JavaScript (ES6+), Tailwind CSS, and custom CSS, showcasing projects, technical skills, educational background, and professional achievements with cross-browser compatibility and optimized page load performance.
- Implemented modern UI/UX design principles including interactive navigation, smooth scroll animations, project highlight sections, and a mobile-first responsive layout to maximize user engagement, accessibility, and recruiter-facing discoverability across all device types.

TuneCart – Music Feedback Platform

2025

- Developed a Spotify-inspired music feedback web platform using HTML5, CSS3, JavaScript (ES6+), and MySQL, featuring user-generated ratings, comments, and community-driven music discovery within a fully responsive, dynamic interface.
- Designed and integrated a normalized relational database schema in MySQL to manage user profiles, track metadata, and feedback records, supporting real-time content rendering and scalable data retrieval for an interactive music community platform.
